

*I cut AI deployments from 3 months to 3 days. Method-led, evidence-bound, production-proven.*

## ABOUT

I architected **SYPNOSE** — the first entire AI organization launched in a single command. Not a chatbot, not a prompt-chain: a self-coordinating system of **300 parallel workers**, **47 model routes**, and a **4-year memory horizon** that builds, ships, and verifies production software.

I sell a method, not a demo. Every claim in this document is backed by a system running in production today.

## THE SYPNOSE METHOD

*What makes a 3-day AI deployment possible — and repeatable in your org.*

- ▶ **Three-layer memory (Index / Topics / Dream)** — Agents stop forgetting. Context compounds across months instead of resetting per session, so engineering velocity grows over time.
- ▶ **Dream Memory consolidation at 3:30 AM (23 min, REM-analog)** — Knowledge gets re-indexed nightly. Teams arrive to a system that's already smarter than yesterday.
- ▶ **300 parallel workers, single command** — Linear backlogs become parallel workstreams. Two-quarter roadmaps collapse into weeks.
- ▶ **47 models routed via CLIPProxy at \$0 marginal cost** — Best-fit model per subtask (reasoning, vision, code, scrape) without lock-in or runaway API bills.
- ▶ **"No proof, no done" iron rule + 80% PR first-pass approval** — Every output ships with verification artifacts. CTOs review evidence, not promises.

## PRODUCTION EVIDENCE

*Five products in active production. Each one is the SYPNOSE Method executing on a different domain — the same playbook, transferable to your stack.*

### GestorIA RD

**314 active accountants · 34,000+ tasks/month · 423 DGII fields**

Fiscal compliance OS for Dominican accounting firms. End-to-end built and maintained executing the SYPNOSE Method. Replaces multi-person back-office teams.

### FactualA

**Mobile OCR · Gemini Vision · Multi-tenant**

Photo of a receipt → fully-structured invoice form in seconds. Vision-LLM productization at consumer-grade UX, deployed to production users.

### IA Trader

**24/7 algorithmic trading · 4 coordinated agents**

Signal, risk, execution, audit operating autonomously. Live testbed of multi-agent orchestration under real-money pressure — same patterns reused across SYPNOSE.

### DGII Harvester

**3-factor login · 6 fiscal forms · 423 fields**

Government fiscal portal scraper. IP-trust handling, forms 606/607/608/623/IR-17/IT-1, normalized into a relational schema. Self-healing against portal changes.

### Casino QR

**Encrypted QR · Tamper-proof · Operational**

Encrypted QR ticket issuance + redemption for casino operators. End-to-end product cycle from spec to production in days, not quarters.

### Infrastructure Backbone

**Contabo VPS 24 GB RAM · 23+ Docker containers**

OpenClaw autonomous agent (847+ Telegram-driven tasks). Coolify deploys, Supabase + PostgreSQL, n8n workflow layer, Cloudflare Tunnels.

## ENGAGEMENT MODELS

Consulting Sprint	Fractional AI Lead	Custom Deployment
2–4 weeks	3–6 months	Scoped per project
Audit, architecture, proof-of-method on your stack	Embedded as Head of AI / Fractional CTO. Hire, set standards, ship.	Full SYPNOSE-Method deployment — agents, memory, verification gates, production handover
<b>\$120–200 / hour</b> or <b>€600–900 / day</b>	<b>\$150–250K / year</b> equivalent (pro-rated)	<b>Fixed-price per scope</b>

Available 100% remote (GMT-4, overlap with EU and US time zones). Spanish citizenship — no work-permit overhead for EU engagements.

## STACK & CAPABILITIES

### Orchestration & Agents

Claude Code, Agent Teams, Claude Squad, OpenClaw, Taskmaster, GSD. Multi-agent waves, inter-agent messaging, supervisor patterns, autonomous Telegram-driven workflows.

### Production Engineering

Next.js 15 / React 19 / TypeScript, Node.js, Go, Python. Docker (23+ containers), Coolify, Linux/Ubuntu, GitHub Actions CI/CD, Cloudflare Tunnels, automated deploys.

### Domain Depth

Fiscal/accounting (Dominican Republic DGII), FinTech/Trading, LegalTech, B2B SaaS, MarTech.

### LLM Ops & Routing

CLIProxyAPI (Go) routing 47 models: Anthropic Claude, Google Gemini, Perplexity, Groq, Cerebras. Prompt caching, cost control, fallback chains, RAG over institutional KB.

### Data & Integrations

PostgreSQL, Supabase, vector search, n8n workflows, headless-browser scrapers, OCR (Gemini Vision), trading-grade real-time pipelines, government API integration (DGII).

## BACKGROUND

**31 years in technology** — full-stack engineering, infrastructure, and systems architecture across multiple industries. Self-directed pivot into applied AI and agent orchestration since 2024, taken from "first Claude API call" to "**300-worker autonomous organization shipping commercial products**" in under 24 months. Founder/operator of HUYGHU & ASOCIADOS. Operates from Puerto Plata, Dominican Republic, serving clients globally.

## NEXT STEPS

References, system walkthroughs, and live access to SYPNOSE infrastructure available on request.
